

Midterm Information

- The midterm will be on Thursday, 3 March 2016, from 11:00am–12:15pm.
- The exam will cover all lectures, readings, and assignments up to and including the class on Tuesday, 23 February 2016. (please see the class schedule for exact coverage)
- Although our quizzes have been open book and notes, and with use of a computer and a partner, *the exam will be a traditional pen-and-paper exam, without use of computers.*
- As a pen-and-paper exam, questions will generally cover knowledge and use of Processing's syntax and techniques. Typical questions might ask you to identify errors in existing code, to sketch the result that is produced by existing code, or to write small code fragments that produces a desired result.
More general questions might involve concepts such as color representations, coordinate systems, etc.
- The exam is closed book, however you may prepare in advance the back of this page with whatever notes you wish to place on it, and you may use this page during the exam. When the exam is over, turn in this sheet with the rest of your exam.
- As an aid in preparing, we are providing a copy of last year's midterm exam and its solutions. This should give you a better idea of the style of questions that I might ask, but please note well that the actual choice of topics have differed from last year to this year, and so some of the questions are on material we have not (yet) covered.
