

## Final Examination Information

- The final exam will be on Monday, 12 December 2016, from 12:00–1:50pm.
- The exam will be cumulative, covering topics from throughout the semester.
- Unlike the homework questions, which are often very open-ended and require a great deal of thought and time to digest, the exam questions should be more rote, expecting you to demonstrate more basic comprehension of the fundamental problems, algorithms, techniques, and analyses that we have seen.
- The exam is closed book and no calculating devices of any type will be allowed. You are allowed, however, to prepare in advance a two-sided piece of  $8.5 \times 11$  paper with whatever notes you wish to place on it, and you may use this page during the exam. When the exam is over, submit this sheet with the rest of your exam.
- As a study aide, we will hand out hard-copies of a past exam and solutions.
